

Stratford Eastern Access Bridge

Following our successful project at Stratford International Station, YJLi have been awarded the fit out of the new Eastern Access Bridge.

The project will extend the new station systems to form a new exit for passengers wishing to get to the Westfield shopping centre.

Our scope includes the provision of additional cameras, speakers and other communications installations, together with the links to connect these to the station systems.

We are also providing mechanical and electrical services, a GLAP and finishings.

The tracks for High Speed 1 pass directly beneath the bridge, making our CTRL CAC (Contractors Assurance Case) an essential requirement for the scheme.
